4G CR-Pass™

IP enabled card reader built for deployment with biometric and card reader-only requirements

The 4G CR-Pass (Card Reader) is ideal for organizations that require a mix of biometric and non-biometric devices and still want the convenience for all devices to be managed on the same platform. Built on the same IP centric 4G platform as the biometric devices, the 4G CR-Pass is slim and sleek for large enterprise or single door applications.

Features at a glance

- Integrated card reader

- Leverages same embedded device platform as the 4G fingerprint readers

- Designed for mixed biometric and non-biometric reader environments

- Embedded device with IP connectivity with optional PoE (for Edge capabilities)

- Simple administration with SecureAdminLite™

- Standalone Door Access Control (SDAC) capabilities

- Compatible with 4G SecureControl™ for added door security

- IP 65 rated allowing for indoor and outdoor capabilities
