

# IOT Automatic Manipulator

WL-HN-01 IOT Automatic Manipulator is used for combustible gas valve for its auto off and on ,protection to avoid the loss of life and property cause by gas leakage .all of this is done without manual operation, when monitored gas concentration increase in the air, will off automatically controlled by IOT Automatic Manipulator and keep safety. This product not only can be widely apply to smart home but also used to some special fields such as smart chemical industry ,smart oil field,smart gas station etc .

## Main features:

R&D based on global advanced ZigBee/SmartRoom technology.

Used to realize off-on with automatically or manual operation by control pipe gas and bottled gas valve .

Connected with wireless gas leakage detection ,will automatically open in response to gas leakage ,and will automatic reset once white alert .

Precision machining ,ensure gas tightness and security .
