

Infrared Motion Detector(Ceiling type)

Based on ZigBee/SmartRoom technology design, WL-MD-B infrared motion detector can detect the intrusion and alarm in real time, when human body enters the monitoring area, infrared rays of human body could be detected by the detector. It will send out corresponding signals according to actual situation, for example, it sends out alarm signals when illegal intrusion happens, it can link other devices in the area when people enter normally.

With its flexible deployment, simple maintenance, powerful extending and low misinformation rate ability etc, it can be widely applied to smart home, smart storage, smart hotel, intelligent security etc.

Function features :

Based on ZigBee/SmartRoom HA protocol design.

Wireless installation mode, it can work at once after simple installation; simple operation.

Personalized design, it can be mounted on the wall or installed on the ceiling at optional position.

Powerful expansibility, low misinformation rate, it is safe and reliable.

High sensitivity and stability, powerful anti-interference ability.
